

Colour Screen POS Hospitality System

SX 8000 Series

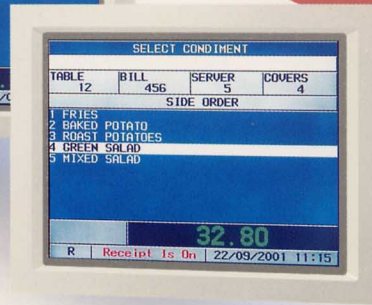

The SX7000 / SX8000 Series terminals provide an innovative and cost effective POS solution for the hospitality, leisure and catering market. The system can be configured to meet the operational requirements of pub, restaurant, café bar, quick service, hotel and leisure operators.

Designed for maximum speed and ease of use, the colour multi line graphic display provides an intuitive user-friendly interface allowing full transaction details to be viewed.

The scroll and select display function allows for simple correction of any operator errors and the ability to review previous transactions.

Available with a choice of colour or mono (SX7000) screen and a choice of high speed internal thermal printers – either wide receipt or 2 station receipt and journal. Flexible system configuration enables the SX8000 and SX7000 to be linked to Uniwell's TX850 touch screen terminal providing a cost effective POS solution.

SX 8000 Series

BENEFITS

- Menu buttons**

For operations with large or complicated menus, individual buttons can be set-up to display a list of items for selection. Buttons could be set-up for starters, mains and desserts for example. The set menu function caters for fixed price meals with a choice of courses.

- Intelligent Prompting**

Intelligent prompting and sub menus lead operators through transactions ensuring a speedy and accurate registration of orders. For example the registration of a steak order will automatically prompt for cooking instructions and any associated side orders.

- Choice of Integral Thermal Printers**

Available with either an 80mm wide receipt or a 2 station receipt and journal, the near silent high speed integral printer caters for all receipting needs from fine dining to admission tickets.

- Kitchen Control**

Automatic transmission of food and drink orders, together with preparation instructions to kitchen and dispense areas. Auto backup and redirect to remote or internal printer.

- Management Information**

A wide range of standard reports provides detailed sales & financial analysis including hourly sales, last time sold, hours worked and flash sales reports.

- Management Control**

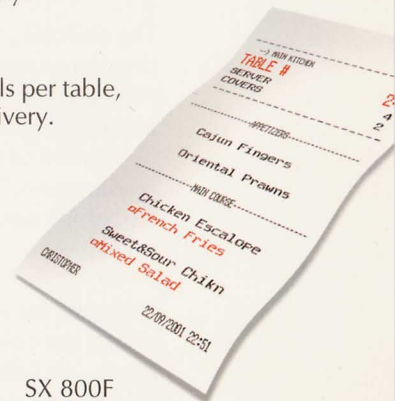

Individual operator analysis, electronic journal, auditors report and remote terminal monitoring provide security and control. Password access to reports and programming options provides additional security.

- Flexible Billing System**

Designed to be configurable the system can handle bar tabs & table numbers, rooms, multi bills per table, split billing, table transfers and pouch system. Seating locations increase efficiency of food delivery.

- Price Control**

Promotions and happy hours can be simply managed using the auto price change option that can be set to change price levels at a certain time and day.

A choice of EPOS terminals within the range:
